

Q - Consider following and generate a solution to find whether the system is in safe state or not?

### Banker's Algorithm

| Available |   |   |   | Processes      | Allocation |   |   |   | Max |   |   |   |
|-----------|---|---|---|----------------|------------|---|---|---|-----|---|---|---|
| A         | B | C | D |                | A          | B | C | D | A   | B | C | D |
| 1         | 5 | 2 | 0 | P <sub>0</sub> | 0          | 0 | 1 | 2 | 0   | 0 | 1 | 2 |
|           |   |   |   | P <sub>1</sub> | 1          | 0 | 0 | 0 | 1   | 7 | 5 | 0 |
|           |   |   |   | P <sub>2</sub> | 1          | 3 | 5 | 4 | 2   | 3 | 5 | 6 |
|           |   |   |   | P <sub>3</sub> | 0          | 6 | 3 | 2 | 0   | 6 | 5 | 2 |
|           |   |   |   | P <sub>4</sub> | 0          | 0 | 1 | 4 | 0   | 6 | 5 | 6 |

① We have to find need? Need = Max - Allocation

|                | Need |   |   |   |
|----------------|------|---|---|---|
|                | A    | B | C | D |
| P <sub>0</sub> | 0    | 0 | 0 | 0 |
| P <sub>1</sub> | 0    | 7 | 5 | 0 |
| P <sub>2</sub> | 1    | 0 | 0 | 2 |
| P <sub>3</sub> | 0    | 0 | 2 | 0 |
| P <sub>4</sub> | 0    | 6 | 4 | 2 |

② - Now we have to determine safe state?

Available is  $\begin{matrix} A & B & C & D \\ 1 & 5 & 2 & 0 \end{matrix}$

1)  $P_0$  need  $\begin{matrix} A & B & C & D \\ 0 & 0 & 0 & 0 \end{matrix}$  and available is  $\begin{matrix} A & B & C & D \\ 1 & 5 & 2 & 0 \end{matrix}$

So  $P_0$  is executed.

New available is (Available + Allocation)

$$(1 \ 5 \ 2 \ 0 + 0 \ 0 \ 1 \ 2)$$

$$= (1 \ 5 \ 3 \ 2)$$

---

2)  $P_1$  need  $\begin{matrix} A & B & C & D \\ 0 & 7 & 5 & 0 \end{matrix}$  but when we compare with available  $1 \ 5 \ 3 \ 2$  it is not satisfying the condition. It moves to  $P_2$  without executing  $P_1$ .

---

3)  $P_2$  need  $\begin{matrix} A & B & C & D \\ 1 & 0 & 0 & 2 \end{matrix}$  and available is  $\begin{matrix} A & B & C & D \\ 1 & 5 & 3 & 2 \end{matrix}$

$P_2$  can be easily executed.

New available is  $(1 \ 5 \ 3 \ 2 + 1 \ 3 \ 5 \ 4)$

$$= (2 \ 8 \ 8 \ 6)$$

---

4)  $P_3$  need  $\begin{matrix} A & B & C & D \\ 0 & 0 & 2 & 0 \end{matrix}$  and available is  $\begin{matrix} A & B & C & D \\ 2 & 8 & 8 & 6 \end{matrix}$

$P_3$  can be execute.

New available is  $(2 \ 8 \ 8 \ 6 + 0 \ 6 \ 3 \ 2) = (2 \ 14 \ 11 \ 8)$

---

5)  $P_4$  need  $\begin{matrix} A & B & C & D \\ 0 & 6 & 4 & 2 \end{matrix}$  and available is  $\begin{matrix} A & B & C & D \\ 2 & 14 & 11 & 8 \end{matrix}$

$P_4$  can be execute

New available is  $(2 \ 14 \ 11 \ 8 + 0 \ 0 \ 1 \ 4) = (2 \ 14 \ 12 \ 12)$

6) Go back to  $P_1$  and the need of  $P_1$  is  $\overset{A}{0} \overset{B}{7} \overset{C}{5} \overset{D}{0}$   
and new available is  $(\overset{A}{2} \overset{B}{14} \overset{C}{12} \overset{D}{12})$  and  
hence now  $P_1$  can be execute.

Now we can say that system is  
in safe.

Process execute like  $P_0 \rightarrow P_2 \rightarrow P_3 \rightarrow P_4 \rightarrow P_1$
